Pumped-VarioManifold 5.0

Pump Microstation

Manifold cabinet UF in wall

The world of Variotherm

For us, a healthy room climate has always been inseparably linked to environmentally sensitive building biology. Today, "sustainability" has become a fashionable term. At Variotherm, we have been putting this concept into practice for 40 years, even when at that time, a word had not yet been invented to describe it. For us, it has always been important to work in an environmentally compatible and energy-conscious way, with efficient use of resources, and we will continue to do so in the future. Every individual team member is actively involved in shaping the company and designing products. From one generation to the next, they successfully carry our values and basic principles.

VARIO THERM
